The Friends of Trailside Museum and Ward Pound Ridge Reservation
PO Box 236
Cross River, NY 10518

Dear Officers of the Board of The Friends of Trailside,

On behalf of myself and my colleagues, Devon Cummings and Daniel Atha, it gives me great pleasure to present to the Board of the Friends of Trailside Museum the eleventh quarterly report of the Flora Project covering the period of March 16, 2025, through June 15, 2025. We gratefully acknowledge the financial support of the Friends and are pleased to have the opportunity to contribute to your mission.

Pictured above is American Featherfoil, *Hottonia inflata*, which we were delighted to be able to observe and document in the mill pond at Michigan Road this spring. This species is notoriously ephemeral, listed as threatened, NY S2, in New York state as well as throughout most of its range (see a map and further discussion on page 4). The presence of these plants demonstrates the sometimes unexpected rewards of good conservation practices, and we commend the Friends and park management for your continued commitment to the stewardship of this remarkable landscape.

During the spring months of this reporting period our work was focused on continued fieldwork and collections, labeling and mounting herbarium specimens for the Trailside Museum Herbarium and delivering duplicates to the Steere Herbarium at the New York Botanical Garden and the New York State Museum. We co-hosted a field trip with the New York Flora Association and worked with two botanical specialists who helped us find plants that can be challenging to locate and identify.

While our contract technically ends this season, due to the number of new finds that we are continuing to encounter, we have decided to continue conducting fieldwork in 2026. We will conduct this fieldwork out of a desire to complete the project properly and will not seek compensation. We will, however, be submitting a proposal for future work curating and imaging the Trailside herbarium for your consideration. We remain committed to our goal, to identify and document every spontaneous plant species growing on the Reserve and document plant communities of conservation importance and concern. We are thankful for your continued generous support.

Respectfully Yours,

Patricia Butter

Flora of Ward Pound Ridge Reservation

Eleventh Quarterly Report

March 16 – June 15, 2025

We gratefully acknowledge the Westchester County Parks Staff that have generously contributed their time and expertise to this study: Taro Ietaka, Jeff Main, Daniela Ciatto, Hayley Lewis, Brendan Wallace, Michael Gambino, Lindsey Feinberg, Jason Klein, Leah Cass, Dan Aitchison, Kristina Hayek, Uri Sarig and Jocelyn Lucente.

Objective:

The objective of the Flora Project at Ward Pound Ridge Reservation is to preserve a specimen of every vascular plant species growing spontaneously in the park and to identify and document the ecological communities, prioritizing those of conservation concern. The collection of pressed herbarium specimens of each plant species provides a physical record available for botanical study. The project expands and improves upon the historic records of the reservation by creating an easily accessible resource for conservation efforts by providing a precise and detailed data set and scientifically verifiable records, enabling park management to identify priority plant species and communities for conservation efforts.

Materials and Methods:

This work was performed in accordance with the details set forth in the Flora of Ward Pound Ridge Reservation Proposal approved by the Officers of the Board of the Friends of Trailside on September 15, 2022. Field Work data and specimen collection was performed by Patricia Butter, Devon Cummings, and Daniel Atha with assistance from Taro Ietaka, Lindsey Feinberg, Leah Cass, Jeff Main, Daniela Ciatto, Hayley Lewis, Brendan Wallace, Michael Gambino, Jason Klein, Kristina Hayek, Uri Sarig, Jocelyn Lucente, Samantha Cronk, Yajaira Ramos, Charlotte Brennan, Molly Hickey, and Madison Rosenbaum of Westchester County Parks, Friends of Trailside Board member Linda Burke, botanical consultants Zihao Wang, and David Werier, and volunteers Varner Redmon, Julia Snook, Kevin Sisco, Amy Eli Trautwein, Dorothy Werkmeister, Dennis Galcik, Susan Allport, Gail Jankus, Maxwell Sabety, Mark Horton-Sacha, Margaret Holen, David Coulson, Lydia Paradiso, and Julie D’Onofrio.

Specimen collection involved creating three pressed and dried herbarium specimens (when populations were sufficient) to specification (11.5” x 16.5”) with parts representing reproductive characteristics and both sides of the leaves of the plant. Whenever possible root structure was also represented.

The specimen data collected included GPS coordinates of the geographic location, a description of the plant’s characteristics that may not be reflected in the dried specimen, the population size, and the plant community in which the species associates.

Flora of Ward Pound Ridge Reservation

Eleventh Quarterly Report

March 16 – June 15, 2025

Photographs were taken of the plants in their natural setting, including detailed photos of key identifying characteristics. These photos were uploaded to the iNaturalist platform.

One specimen of each species will be mounted on archival herbarium paper together with a specimen label for Westchester County Park's herbarium.

One specimen and label of each species, together with a spreadsheet containing the relevant data will be contributed to the Steere Herbarium at the New York Botanical Garden, which has digitization capabilities to make the specimens available for study to the scientific community at large. An additional duplicate of each specimen will be contributed to the New York State Museum, where the herbarium is currently undergoing a revitalization, and is expected to be available online in the near future.

A spreadsheet has been established in Google docs with the data for each specimen collected. This data is formatted in the Darwin Core Code for ease of uploading to GBIF, the Global Biodiversity Information Facility by the herbaria.

In consideration of the objective of the Flora Project, 127 plant specimens and data were collected at over thirty-four locations in WPRR (see Appendix I for a map and complete list of collections).

Specimen Collections: 127. This number represents a 45% increase in collections over the same period in 2024. All specimens and the associated data have been recorded in a shared spreadsheet (see Appendix II for the complete list).

- Four rare plant species were documented with specimen records.
- Three plants collected were the first records of the species from Westchester County.

Notable collections:

- Curly-leaved Yucca (*Yucca filamentosa*), Naturalized, first record from Westchester County, collected in a meadow near Michigan Road.
- Moss Phlox (*Phlox subulata*), NY S4, first record from Westchester County, naturalized from plantings in the cemetery.
- White Ash (*Fraxinus americana*), CR ICUN red list, critically endangered, collected a field near Trailside Museum.
- American Featherfoil (*Hottonia inflata*), NY S2, collected from the mill pond at Michigan Road.
- Black Ash (*Fraxinus nigra*), CR ICUN red list, critically endangered, collected near the Waccabuc River.
- Emmons's Sedge (*Carex emmonsii*), NY S3, collected in the shrubland near Michigan Road.
- Japanese Iris (*Iris sanguinea*), Naturalized, first record from Westchester County, collected from the field near Meadow Parking area.

***Hottonia inflata*:**

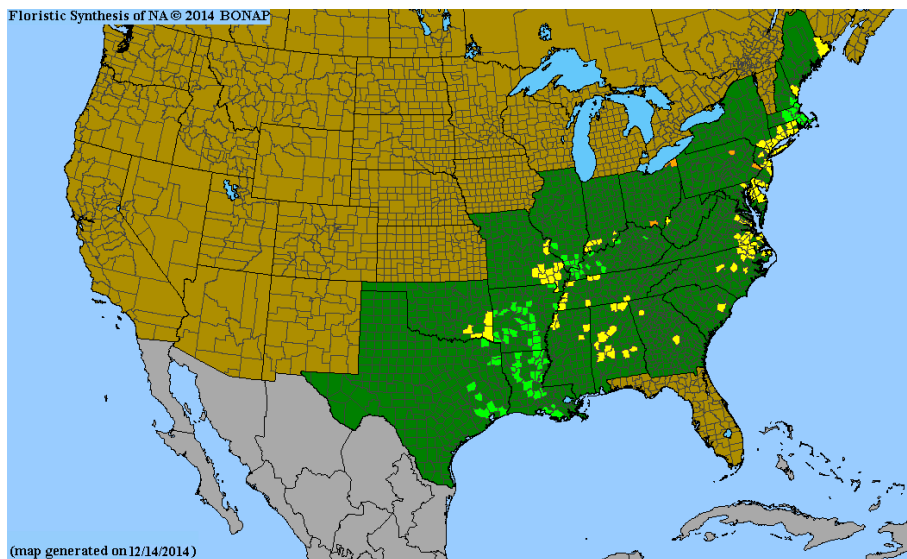

An unusual plant that we documented this quarter, *Hottonia inflata*, listed as threatened NY S2, is notable and worthy of mention here. Following last year's dam reconstruction project at the mill pond at Michigan Road hundreds of the aquatic plants emerged and bloomed this spring. We had searched for the plants over the past two years, trying to follow a historic and enigmatically written New York Natural Heritage Program record from 1999 to no avail: "The plants were observed at Ward Pound Ridge Reservation at a vernal pool located approximately 1700 feet SSE of Honey Hollow. Access is from unnamed trails."

The plants not only have a unique appearance but also a poorly understood lifecycle. They are known to disappear for years at a time, making it difficult to track populations. It is believed that a period of drought followed by rain may be the trigger for germination, which is the series of events that occurred at the mill pond during the reconstruction of the dam at the end of last year. It was such a pleasure to finally be able to document these plants this year in such great numbers in an unexpected location. The map below indicates the known distribution of *Hottonia inflata* in the US by county. It demonstrates how rare and infrequent the plants are throughout their range.

Flora of Ward Pound Ridge Reservation

Eleventh Quarterly Report

March 16 – June 15, 2025

The range map by county of *Hottonia inflata* from BONAP.org. Orange counties indicate where the species is considered extirpated, and in yellow counties it is listed as rare.

iNaturalist observations: 387

Notable observation:

- American Alumroot (*Heuchera americana*), NY S3, three plants were observed, not collected due to scarcity.

Trailside Herbarium: The collection at The Trailside Herbarium has grown and now includes 750 mounted specimens from the Flora project. Each of these specimens has been carefully collected, documented, dried, labeled and mounted using the highest scientific standards.

All specimens undergo an aggressive freezing process prior to addition to the collection to eliminate insects. The process included freezing at -0 degrees Fahrenheit for five days, followed by three days at room temperature, and then an additional five days at -0 degrees.

Research and Collaborations:

Notable items accomplished included:

On June 10, 2025, 256 specimens from the 2024 season were delivered to the Steere Herbarium at the New York Botanical Garden.

In February and June, 240 specimens from the 2024 season were delivered to the New York State Museum Herbarium. All specimens were delivered together with a spreadsheet containing the data from the labels structured to conform to the Darwin Code Standards utilized by the worldwide biological community to publish their data with GBIF, the Global Biodiversity Information Facility. To date, 416 specimens from the flora project have been added to the datasets of the herbaria and are now available online:

[https://www.gbif.org/occurrence/search?basis_of_record=PRESERVED_SPECIMEN&has_geospatial_issue=false&taxon_key=6&year=2021,2025&geometry=POLYGON\(\(-73.612%2041.27645,-73.61029%2041.21913,-73.56374%2041.21999,-73.56717%2041.27559,-73.612%2041.27645\)\)](https://www.gbif.org/occurrence/search?basis_of_record=PRESERVED_SPECIMEN&has_geospatial_issue=false&taxon_key=6&year=2021,2025&geometry=POLYGON((-73.612%2041.27645,-73.61029%2041.21913,-73.56374%2041.21999,-73.56717%2041.27559,-73.612%2041.27645)))

On June 7, 2025, Westchester County Parks co-hosted a botanical field trip at WPRR with the New York Flora Association. The event drew 20 botanists and students who were eager to learn about the flora of the Ward Pound Ridge Reservation. Having a knowledgeable group of plant lovers spend a day with us paid off not only in a great experience, but the group helped us identify two new plants for our list: *Carex argyrantha* and *Woodwardia virginica*.

Daniel Atha demonstrated the unique floral structure of *Kalmia latifolia* on the field trip co-hosted by the New York Flora Association and Westchester County Parks on June 6, 2025

In summary, the goal of the Flora Project is to identify and document plant communities of conservation importance and concern. This study will advance scientific knowledge of our flora at county, state and regional levels. The Ward Pound Ridge Reservation is an important area for conservation, and the commitment to conservation and financial support of the Friends of Trailside comes at a crucial time. This work on the Flora of Ward Pound Ridge Reservation has been performed by Patricia Butter, Devon Cummings and Daniel Atha in approximately 250 hours of labor. The next quarter will be dedicated to further fieldwork and the collection of specimens.

Report prepared by Patricia Butter with contributions from Devon Cummings and Daniel Atha.
